

How To Get The Bugs Out Of Your Pool

There are many times of bugs that end up in swimming pools. Most of them are recognizable (lady bugs, caterpillars, bees, wasps, etc.) and oftentimes they see your swimming pool as a water source. But there are two types of water bugs that you might see that are a bit more difficult to remove: water boatmen and backswimmers. A water boatman is typically ¼” long and is a grayish-brown bug with a fairly thin body. Water boat-men feed on algae and organic matter. Backswimmers are slightly larger than water boatmen and eat bugs such as water boatmen. Backswimmers swim across the pool surface, and although they are not harmful—they can bite. One way to get rid of water bugs is by eliminating algae and raising the chlorine level in the pool. But the best way to get rid of the water bugs is by using **Bug Off**—which eliminates insects from the pool water. Following is more information on the product:

Bug Off—*benefits*

- A unique non-foaming formulation
- Reduces the surface tension of pool water, completely ridding the pool surface of floating insects
- With reduced surface tension insects cannot float and they sink to the bottom of the pool where they are filtered or vacuumed away.

Bug Off—*important notes*

- For best results, add as close as possible to problem area of pool.
- Repeat application if necessary.
- Do not add to skimmer basket.
- Insects sink to base of pool. Filter or vacuum to waste.

Bug Off—*dosage rate*

1 Quart treats 10,000 gallons pool water
