

Our Recommended Chlorine System

Gohlke Pools has been very successful using Poolife's Once-A-Week 3-Step Program. This system is very easy to use and uses a minimum amount of chlorine in conjunction with low levels of algicide. There are certainly other ways to chlorinate, but we have found the following to be most effective and efficient.

Step 1 – MPT – MPT Extra is a multifunctional tablet. It can be used in your skimmers, a pool tablet floater, and also tablet feeders. MPT Extra is a 3 in 1 tablet that prevents algae, prevents staining and scaling, and clarifies water! Use 1 tablet per 10,000 gallons to maintain your chlorine levels.

Weekly Application Rate

Each Brite Stix can treat 5,000 gallons of water. Apply to skimmer. Add the full dose, even if there are pieces left in the skimmer.

Step 2 – Clean Shock – Clean Shock is a granular form of chlorine, which oxidizes waste, kills algae, and clarifies the water. It is a unique blend of oxidizing and clarifying agents that dissolves almost instantly.

Weekly Application Rate

Apply directly to the pool at a rate of one pound of product for up to 10,000 gallons, with the pump in operation, pour evenly around the edges of the pool.

Step 3 – Defend +

Defend + is non-foaming algae preventative that keeps algae away as well as clarifying the water. It is ideal for the prevention of green algae. Use 8-16 oz. per 10,000 gallons.

Weekly Application Rate

Apply 1oz. for every 5,000 gallons. Apply with the pump in operation, simply pour the liquid around the edges of the pool.

For winter application, apply the same amounts as above, except do it every other week instead of every week. Please do not ignore your pool in the winter; although it takes less care, it still needs some attention. Keep the water tested and treated as necessary.

Taking your water to the next level

Occasionally we have customers that are not satisfied with the quality of their pool water or they simply want to outdo their neighbor. For them, we recommend Endure. It will truly take the quality of your water to the next level. Following is a brief description of the product:

Endure- Endure is a unique product formulated to “optimize” the performance of all the chemicals in the water. With Endure, augmenting the Once-A-Week 3-Step System, the customer will realize:

- Clear and sparkling Caribbean blue water
- Smooth and gentle feeling water decreases skin and eye irritation
- Enhances sanitizer performance and helps prevent algae
- Helps protect equipment and pool surfaces
- Improved chemical efficiency — lower operating costs

Application Rate

The ideal range of Endure is 30-50. This is something we suggest having us test every 3 months to adjust as needed. 1 lb. per 1,000 gallons increases Endure level 17 ppm. Pour directly into the pool.

If you follow the above recommended application amounts and keep the pH in the proper range, you will be successful in your quest for a beautiful, safe pool.

BE SURE TO READ ALL LABEL DIRECTIONS BEFORE ADDING ANY PRODUCT TO YOUR SWIMMING POOL.
